

Anti-vandalism-films

Vandalism causes damages amounting to millions annually and inexpensive products to counteract are rare.

Shop windows, bus stops, busses, trains and showcases are subject to arbitrary demolition and vandalism. Everyone knows smeared bus stops, windows or subway stations. Curing the damage costs millions and millions every year, but there is no end in sight because cleaned surfaces attract further vandalism.

The OPALFILM® Anti-vandalism-films are clear sighted high effort films with a material strength of 190µ for glass surfaces and 115µ for plastic undergrounds (PC and PMMA). Installation can be executed on the interior or on the exterior. An expensive exchange of glass will no longer be necessary as the film can be replaced without difficulty. OPALFILM® Anti-vandalism-films protect glass and plastic undergrounds from scratching as well as from sprayer attacks.

A product against scratching and sprayer attacks.

OPALFILM® Anti-vandalism-films:

- Material strength of 190µ for glass surfaces and 115µ for plastic undergrounds (PC and PMMA)
- Clear
- Suitable for interior and exterior use
- Effortlessly removable in case of scratches or defilement
- Expensive exchange of glasses no longer necessary
- High light transmission, almost invisible when installed
- Lowest reflection
- Easy to clean due to special surface
