

Privacy films

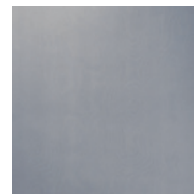

Glass is not just a building material, it is also a symbol for transparency, openness and accessibility. However, complete transparency is not appropriate or desirable in every situation. Windows of changing rooms or in medical treatment facilities, for instance, need permanent privacy protection that nevertheless lets in light, whereby the visibility can be reduced, as desired, by up to 100%.

OPALFILM® privacy films can be installed on all glass surfaces. The OPALFILM® range comprises films that can be used to provide partial or all-over cover and are available in a variety of colour shades. Employed as a visual design feature, OPALFILM® privacy films can be fitted in offices, homes, exhibition spaces, fair stands, showcases and other objects.
