

# ClassicGARD®

vertical bar fencing with electric surveillance

**ClassicGARD® enables the adaptation of a detection fencing system to special aesthetic and architectural requirements.**

ClassicGARD® is a quiescent current monitored front grille system that can be varied from a simple classicist solution to a multi-colored baroque construction.

The quiescent current is monitored within the metal construction of the fence and has an extremely low false alarm rate. It is hardly recognizable to intruders.

In terms of design, the system is available from playful baroque to modern purist. In addition to steel posts, masonry posts or natural stone posts can also be safely monitored.

Color adaptations in all RAL colors underline the versatile application possibilities of the system. It is therefore particularly suitable for securing private properties or historical parks.

Areas of application:

- Private properties
- Estates
- Gardens and parks
- site monitoring of historical buildings / monuments

The information of this datasheet is based upon long-time practical experience and relies on the current state of knowledge and technology. The buyer still has the duty to test our products for the fitness for use. Beyond that our terms and conditions shall apply.

With the release of a new datasheet the previous data lose their validity.
